Mounting Instructions

1. Make sure the rope is free of load.
2. Apply transducer to the rope and clamp the rope in the centre in a way that the rope cannot move along the sensor. Do not deformed the rope too much.
3. Connect the cables.
4. Apply max. load for several times and check the clamping, afterwards re-tighten if necessary.
5. Calibrate the system if necessary (rated load, switch point etc.).
